

# Converting Relational Database to XML

**Example:** Export the following data into XML and group books by store

- Relational Database:

**Store** (sid, name, phone)

**Book** (bid, title, authors)

**StoreBook** (sid, bid, price, stock)

XML:

```
<store> <name> ... </name>
        <phone> ... </phone>
        <book> <title>... </title>
                <authors> ... </authors>
                <price> ... </price>
        </book>
        <book>...</book>
        ...
</store>
```
